Intro & Goal

Our goal is to create an application that will allow anyone who wants to get to know the country and travel in it to find the best places to travel according to criteria that are important to them and to enjoy exploring and getting to know the country.

Who's it for?

1. **Parents/Families** - Parents or families who want to take a break from the rat race that everyone is in and go relax on one or several days of an experiential trip that the whole family can have.
2. **Teenagers** - who want to go explore the country with friends and go on a fun trip and create lifelong memories

Why build it?

1. Avoid stress and know that the place planned for the trip contains all the things that are important to us as travelers.
2. Original.
3. Discover new places in Israel that you can travel to.

What is it?
User Types

There are two options for the user to do and he can choose to be both at the same time

1. **Review** -

Given the current place where the user is located \ a place that the user knows and wants to add to our database, by clicking on the screen he can enter the new place by filling out a quick questionnaire about the place.

The questionnaire contains questions such as:

a. Is the place suitable for families?
b. Is it allowed to light a fire in the place?
c. Are there toilets and showers?
d. Is camping allowed? And more similar questions...

By adding the review, our map is filled with places that you can get to know and take trips.

2. **Looking for** -

This type of user is actually the person looking for a trip.

With the entire map appearing in front of her, she sees lots of landmarks of places from the north to the south. He can filter for the criteria that interest him such as: services, camping, or nouns such as "the beach".

Homepage View

The home page shows the map of the country with markings of the places that are in our travel database.

Each time you click on a mark, a small window will open that shows the name of the place.

Detailed View

The Detailed View page - We will reach this page after clicking on the small location window on the home page.

This page contains all the details about the place:

His name, review of the place, pictures of the place.

In addition, it also contains the information taken from the questionnaire that the reviewers did.
